Offensive Security and Ethical Hacking

The Offensive Security and Ethical Hacking Course provided 12 hours of hands-on, practical training. During the course, the participant gained proficiency in reconnaissance analysis, assessing public exposure risks, and identifying potential fraud and phishing scams. They gained an understanding of how cyberattacks are conducted to evaluate organizational defenses and observed how network resources interact in post-exploitation scenarios, including pivoting from one compromised system to another. The participant acquired practical experience in vulnerability assessment, penetration testing, and phishing attack simulations using the Kali Linux OS. They achieved a hacker's perspective on security, attaining comprehensive visibility into infrastructure vulnerabilities.
